According to the findings of Logistics Management’s (LM) 28th Annual Salary Survey conducted by Peerless Media Research Group (PRG), average earnings and compensation have actually leveled off over the past year. However, our research team also found that an aging workforce is giving way to younger, more highly trained professionals who also happen to be savvy technologists. For the logistics professionals who have adopted today’s technological tools, higher salaries are clearly corresponding.

But our research team warns that the cutting edge skills that newly-hired workers might have coming out of college are going to be obsolete in three years to five years, so they have to determine how to keep improving in key areas such as decision analysis, IT tools, cross-functional and cross-organizational teaming, as well as finance.

Also worth noting, say our researchers, is that now, more than ever, experience pays. Young people joining the workforce should aim to grow within their current organization, rather than chasing after that better offer. In fact, our survey indicates that the long-term payoff could be substantial.

This year’s results, based on 801 qualified LM reader respondents, indicate that 64 percent did see a modest salary increase in 2011. Of that number, the average bump was 6 percent.

Those respondents with the title of “logistic manager” earned an average salary of $95,479 in 2010 and brought in a slightly higher $96,120 in 2011. For supply chain managers, the average increase was more impressive: up from $100,159 in 2010 to $128,335 in 2011. Corporate or division managers made significant salary gains as well. They earned an average of $157,320 in 2011 versus $138,630 in 2010. The overall median this year bumped up a meager $1,000 to $91,000.

While these raises kept managers ahead of inflation and escalating standard-of-living costs, 6 percent of our respondents reported a salary decrease and 30 percent reported that they received no raise at all.

E-commerce challenges
While younger, more technology-enabled logistics professionals are making their way up the ladder, older logistics managers simply can’t afford to be complacent or get “comfortable,” our survey indicates.
the pack
Educators and executive recruiters echoed this sentiment during interviews in the weeks immediately following the release of this year’s salary survey data.

“Talent management—recruitment, development, and retention—is an increasing challenge across many fronts in supply chain management as the discipline and business becomes more complex,” says Dr. Theodore Stank, professor of logistics at the University of Tennessee.

He says that the move toward e-commerce is just one way that “old dogs” have to learn new tricks, while companies are also struggling to find people with good decision analysis skills in order to use all of the new data available to them.

Corporations in the U.S. and Europe will move an additional 750,000 jobs in IT, finance, and other business services to India and other low-cost geographies by 2016, according to new research from The Hackett Group, Inc.

As noted in Supply Chain Management Review late last year, researchers were trying to determine if levels of additional offshoring in these areas would begin to decline by 2014.

This is indeed their conclusion. Furthermore, in the next 8 to 10 years the flow of jobs offshore is likely to cease, as companies simply run out of business services jobs suitable for moving to low-cost countries.

The Hackett Group’s offshoring research, which examined available data on 4,700 companies with annual revenue over $1 billion headquartered in the U.S. and Europe, found that by 2016, a total of 2.3 million jobs in finance, IT, procurement, and HR will have moved offshore. This represents about one third of all jobs in these areas. India is by far the most popular destination, with nearly 40 percent of the jobs being offshored headed there.

But The Hackett Group’s research sees additional offshoring levels in business services, which are currently at around 150,000 new jobs each year, leveling off or declining after 2014. The Hackett Group’s research also found that of the 5.1 million business services jobs remaining onshore at U.S. and European companies in 2012, only about 1.8 million have the potential to be moved offshore, with 750,000 of those moving by 2016. So by the end of the next 8 to 10 years, the traditional model of lifting and shifting work out of Western economies into low cost geographies will cease to be a major factor driving business services job losses in the U.S. and European.

Hackett’s research also found that automation and other productivity improvements are another major factor driving job losses in business services at U.S. and European companies. Automation and other productivity improvements will have caused the elimination of 2.2 million business services jobs at these companies between 2006 and 2016, and these factors are currently driving the elimination of around 200,000 jobs annually.

“The U.S. and Europe, offshoring of business services and the transformation of shared services into Global Business Services, have had a significant negative impact on the jobs outlook for nearly a decade,” said The Hackett Group Chief Research Officer Michel Janssen. “That trend will continue to hit us hard in the short-term.”

“Most organizations do not have a well-articulated talent management strategy,” says Stank. “Business executives need to ask a number of key questions: What kinds of new people do they need to buy from the market? What can they develop in the people they already have? How do they keep people progressing in their careers to deal with tomorrow’s new challenges? The companies that are figuring this out first are winning the war for talent.”

The Logistics Management and PRG research teams also found that logistics professionals with a skill set including information technology are among the highest paid. This did not surprise Stank. His advice for young and old alike is to “stay thirsty, my friends.” He believes that everyone at a management level must be committed to a lifetime of learning.

“Key areas such as decision analysis, IT tools, cross-functional and cross-organizational teaming and interaction, along with finance will remain in demand,” says Stank. “Logistics managers should pursue online coursework, executive education, professional certification—all geared toward shoring up gaps in current skill sets and adding new skill sets that are required for their next promotion or for the realities of the world in 3 to 5 years.”

Dr. Bruce Arntzen, executive director of the supply chain management program at MIT, says that students who have already worked in supply chain for a few years will benefit much more from the supply chain management program than a student coming right out of undergraduate programs—and they will be rewarded much better financially as well.

“Yesterday, if you had a college degree you had a leg up on the competition,” says Arntzen. “Today you need to have a master’s degree. Interestingly, about a third of the students who are getting their master’s degree in supply chain at MIT already have an MBA or a master’s degree in some other field already, so these students will have two.”

Meanwhile, adds Arntzen, veterans must resist the idea of becoming “comfortable” in their current positions. “More than anyone else, these people must be the agents of change,” he says. “They must embrace new technology and champion its implementation. Otherwise, co-workers and management may suspect that they may be part of the problem rather than the solution.”

Experience still matters
That fact that logistics managers in the 65-year-old bracket are still pulling down six-figure salaries demonstrates that experience still matters. As our research indicates, the 55-year-old to 64-year-old group represents today’s top earners.

Building a career foundation

Anecdotal evidence gathered by LM after the survey was completed confirmed that veterans want to share their experience with younger co-workers.

Barry Smith, supply chain director for Lincoln Electric in Cleveland observes that recent graduates may have unrealistic expectations. “There has been a significant inflation on starting salaries in some areas,” he says. “But employers are not going to reward new hires unless they have proven technical expertise.”

The “entitlement” generation may be in for a rude awakening, says Brad Larsen, transportation and logistics manager for Winegard Company in Burlington, Ind. “Most of my age group had to start out in the trenches and learn on the fly to get where we are today,” he says. “After 25 years, we have a good grasp on where things are headed and should be at a good spot in our careers compensation wise.”

Larson also maintains that colleges and universities will be “challenged” in preparing fresh graduates to bring value to the companies they join. “Having graduates ready to contribute right away is vital,” he says. “But it will be recognized and rewarded.”

“Today’s young people have to be prepared to climb the corporate ladder,” says Art Meyer, warehouse, equipment and purchasing manager for NPL Construction Company in Dallas. “Education is a big advantage, but they really must have a work ethic to succeed and earn the salary they desire.”

Allen Masters, head of central stores resource management for the University of Florida in Gainesville, agrees, but says “climbing that ladder” is easier in the private sector, rather than within “a state agency.”

Bob Stone, regional sales manager for Right Freight Solutions in Townville, S.C., says that the private sector is providing more incentives for college graduates to pursue a career in logistics. “We never have trouble attracting young people to this business,” he says. “But keeping them in one position is difficult. Many of them go through three to four jobs before they settle down.”

Getting them to “settle down” might be made easier by providing bonuses based on performance, says Brenda Gautier, director of carrier engagement for MW Logistics, LLC in Dallas. “Given the added responsibilities logistics managers are taking on these days, we expect them to work smarter and be more efficient,” she says. “And if they can contribute to the company’s bottom line, they should get something beyond their salary at the end of the year.”
